EXCEL PHASE 3

Data Management And Analysis Techniques For Professional Excel Reporting.

SORTING, FILTERING & CONDITIONAL FORMATTING

Sorting

Used To Arrange Data.

Basic Sort

- A → Z
- Z → A

Custom Sort

- Sort By Color, Text, Date

Multi-Level Sort

- Sort By More Than One Column

  Example: First By Department, Then By Salary

Filtering

AutoFilter

- Shows Data Based On Condition
- Example: Show Only “Sales” Department

Advanced Filter

- Used For Complex Conditions
- Can Copy Filtered Data To Another Place

Conditional Formatting

Changes Cell Appearance Based On Value.

Examples:

- Highlight Numbers > 80
- Color Negative Values Red
- Data Bars, Color Scales, Icons

REMOVE DUPLICATES, FIND & REPLACE, TEXT TO COLUMNS

Remove Duplicates

- Removes Repeated Values
- Keeps Unique Data

Steps:

Data → Remove Duplicates

Find & Replace

- Find Text Or Number
- Replace With New Value

Shortcut:

Ctrl + F (Find)

Ctrl + H (Replace)

EXCEL

Text To Columns

Splits Text Into Multiple Columns.

Example:

- Full Name → First Name | Last Name

Used With:

- Space
- Comma
- Dash

Delimiters

Characters That Separate Data:

- Comma (,)
- Space
- Tab
- Hyphen (-)
